Table 1 Radiocarbon determinations from Sheikh-e Abad

Trench	Deposit type	Material	Lab no.	Conventional date BP	Intercept with calibration curve	Calibrated date BC 2-sigma (95.4%)	$\delta^{13}\text{C}$ (PDB)
1	Ash layer	Charred plant material (seed)	Beta-258647	10130±60	9810	10100–9450	n/a
1	Ash layer	Charred plant material (wood charcoal)	Beta-267508	9970±50	9400	9470–9730 and 9680–9300	-23.8‰
1	Ash layer	Charred plant material (seed)	Beta-267509	9730±60	9240	9280–9410	-22.7‰
2	Ash layer	Charred plant material (seed)	Beta-258646	8810±60	7960	8230–7730	-23.2‰
3	Building 2 (floor)	Animal bone: sheep/goat	Beta-258648	8600±40	7590	7640–7580	-18.9‰

Table 2 Records of the frequency and abundance of all recorded taxa across Trenches 1, 2 and 3 at Sheikh-e Abad. ‘cf.’ denotes a lower certainty of identification and brackets the uncertainty of cultivated/domestic status. * indicates taxa interpreted as possible “arable weeds” based on correspondence analysis as discussed in text

Table 3 Classification of major wild plant taxa at Sheikh-e Abad based on their likelihood of surviving in dung (ranked from low to high) as discussed in text

Category	Taxa
Low	<i>Hordeum spontaneum</i> , <i>Bromus</i> spp., <i>Taeniatherum caput-medusae</i> , <i>Stipa</i> spp., medium-seeded grass indet., Brassicaceae indet.
Medium	<i>Lolium perenne/rigidum</i> , <i>Piptatherum holciforme</i> , <i>Bellevalia</i> sp., <i>Euclidium syriacum</i> , <i>Adonis</i> sp., <i>Ajuga</i> sp., <i>Neslia paniculata</i> , Brassica/Sinapis sp., Brassicaceae type 3, <i>Vaccaria pyramidata</i>
High	<i>Coronilla</i> sp., small-seeded legumes, <i>Bolboschoenus glaucus</i> , <i>Chenopodium</i> spp., <i>Galium</i> sp., Cyperaceae spp., <i>Heliotropium</i> sp., <i>Hyoscyomas</i> sp., Lamiaceae spp., <i>Hypericum</i> sp., <i>Poa</i> spp., <i>Crypsis</i> sp., <i>Sporobolus</i> sp., <i>Glaucium</i> sp., <i>Papaver</i> spp., <i>Silene</i> sp., small-seeded grass indet.
